

107 年度 國外教授來訪學術演講「Exact Linear Likelihood Inference for Laplace Distribution」 演講

時間：2018-10-23

地點：S433

In this talk, I will discuss exact maximum likelihood estimators for the location and scale parameters of the Laplace distribution based on complete and censored data (Type-I and Type-II). Then, I will develop the exact distribution theory for these MLEs using which exact linear likelihood inference will be developed for the life characteristics of Laplace distribution under censored data. Finally, some examples will be presented to illustrate the theoretical results established.
